

Phase 6 Report: User Acceptance and Legal Validation

Residential House Rent Control and Administration System - Gate G6 Package

Legal Basis: Proclamation 1320/2016 + Directive 7/2016 + Model Agreement

Contents: UAT Scripts and Results, Legal Validation Memorandum, Defect Log

Baseline: SRS v1.1 (CR-01 Trilingual: Amharic, English, Afan Oromo)

Gate: G6 - Sign UAT Certificate and Authorize Migration and Pilot

Date: September 2026

1. Introduction and Phase 6 Scope

Phase 6 is the phase in which the system's own users take over the questioning. The implementation plan defines its objective in one sentence: let the real roles judge the system, using scripts derived from the use cases, and let the legal side certify that automated behaviour matches the directive. In line with that objective, the phase ran three activities. Role-based user acceptance testing rehearsed the principal workflows of Proclamation No. 1320/2016 and Addis Ababa Directive No. 7/2016 in the hands of the roles that perform them daily - registrars, stamping desks, Bureau analysts, the Bureau head, complaint officers, hearing committee members, sub-city monitors and system administrators. The legal validation session then walked the forty-seven-row compliance matrix article by article, confirming behaviour against the source texts and recording any divergence. Defect triage ran continuously, merging every failed acceptance step into a severity-classified defect log with an agreed fix schedule and re-test evidence.

The phase entered on the owner's Gate G5 approval, with the platform carrying a clean test record: the automated battery stood at one hundred thirteen passing cases across five suites with zero failures, the compliance matrix showed every row passing, and the live audit chain was verified intact. Three open items travelled with the phase by documented disposition: O1 (the directive's fine-ladder figures pending the official Amharic text), O-7 (woreda register reconciliation before the pilot) and O-8 (certification of the Afan Oromo legal glossary under change request CR-01). None of them alters automated behaviour, and each was re-examined during the legal session; the walkthrough records the two that touch matrix rows as confirmations with dispositions rather than deviations.

This report is the Gate G6 package. Its chapters follow the deliverables the plan names for this phase: the UAT scripts and their results (chapters 2, 3 and 4), the legal validation session record and the legal validation memorandum (chapters 5 and 6), and the defect log with closure status (chapter 7). Chapter 8 records the trilingual acceptance evidence that change request CR-01 and non-functional requirement NFR-06 require, chapter 9 presents the UAT certificate prepared for the owner's signature together with the gate checklist, and chapter 10 states the gate decision request and the transition to Phase 7. At the time of writing the acceptance battery stands at 8 of 8 scenarios passed with 50 of 50 steps passed, none failed or skipped, and the legal session concludes with no unresolved deviation.

2. UAT Approach and Acceptance Environment

The acceptance approach follows the plan's commitment that scripts are derived from the use cases and executed by the real roles. Every scenario in the catalogue traces to entries of

the SRS v1.1 use-case registry, and every step within a scenario names the legal basis it demonstrates, so a reviewer can read each rehearsal as law first and procedure second. Scenarios run over the live HTTP API of the platform - the same interface the console uses - and every call carries the acting officer's staff code. This single design decision makes the acceptance run structurally honest: role separation, tier-based authorization, the legal refusal gates and the audit trail are exercised exactly as a real working session would exercise them, not as a test harness would simulate them. Negative steps are scripted with the same care as positive ones: where the law refuses, the scenario attempts the refused act and expects the refusal with the violated article named.

Table 1: Scenario coverage against the use-case registry

Scenario	Role cluster	Use cases exercised	Steps
UAT-01	Woreda registrar + stamping desk	UC-L0, UC-L1, UC-L2, UC-R1	9
UAT-02	Woreda registrar	UC-L2, UC-R1	5
UAT-03	Bureau analyst (study) + Bureau head (publish/effect)	UC-L3, UC-M2	6
UAT-04	Woreda complaint officer	UC-T3, UC-R3	7
UAT-05	Committee member (hearing) + registrar (filing)	UC-T4, UC-C1	6
UAT-06	Woreda payment desk (recording tenant/landlord payments)	UC-T2, UC-P2	5
UAT-07	Sub-city control team + Bureau head	UC-R2, UC-R4	7
UAT-08	Amharic, English and Afan Oromo speaking officers and public	UC-M1, UC-P1, UC-P4	5

The acceptance environment is the seeded demonstration environment used throughout construction and testing: one hundred thirty-one organization units arranged in the Ministry - Bureau - sub-city - woreda hierarchy, thirteen roles, the active model contract, the trilingual localization catalogue, and the eight demo staff whose codes (STF-0001 through STF-0008) appear as actors in the scenarios. Test data is created by the scenarios themselves through the public service layer, and the demonstration dataset is restored by reseeding plus the end-to-end walkthrough after the run, so acceptance never consumes fixtures it did not create. The runner writes its evidence to the UAT results register with a run identifier, timestamps, per-step observations and durations, and the console exposes the

same evidence live on the P6 tab; both the command-line runner and the console POST action execute the identical battery.

Two rules govern the run protocol. First, the merge rule: any failed acceptance step is automatically promoted into the defect log as a severity-two defect - a failed acceptance step blocks the workflow it rehearses - and blocks Gate G6 until it is fixed and the battery re-run clean. Second, the re-test rule: after any defect fix, the entire battery re-runs, not only the failed scenario, so that a fix is proven against the whole acceptance surface rather than against its own symptom. Both rules were exercised in this phase: the first battery run surfaced one failed step, triaged as DEF-06-03, which was fixed in-phase and cleared by a full re-run, as chapter 4 records.

3. UAT Scenario Catalogue

Eight scenarios cover the principal work of the three administrative tiers and the change request. Together they rehearse the complete registration chain from party onboarding to the registry book, the refusal gates at intake, the annual rent adjustment cycle from study to effect, the complaint pipeline inside its statutory clocks, the committee hearing with court escalation, the electronic payment ledger with its boundary conditions, vacancy monitoring with the penalty ladder, and trilingual service delivery. This chapter records the catalogue; chapter 4 records the execution. Each scenario's steps carry their own legal basis, so the tables in chapter 4 double as a walkthrough of the law in working order.

Table 2: UAT scenario catalogue (as executed)

ID	Title	Actors	Legal basis	Objective (abridged)
UAT-01	Woreda registrar: registration file lifecycle	STF-0001, STF-0002	Proc. Art. 4; Dir. Arts. 6-9	The registrar runs one real registration file end to end: party onboarding with the original-and-copy rule, property capture, file presentation on the active model contract, the nine-point checklist, certification, the stamping desk and registry-book entry..

ID	Title	Actors	Legal basis	Objective (abridged)
UAT-02	Woreda registrar: legal refusal gates at intake	STF-0001, STF-0002	Proc. Arts. 6, 12; Dir. Arts. 6, 9	Negative rehearsal: the system must refuse every intake that the law refuses - a one-year lease, a three-month advance, filing at a non-woreda office, certification without the checklist, and a stamper attempting a registrar act..
UAT-03	Bureau analyst and head: annual adjustment publication flow	STF-0004, STF-0005, STF-0001	Proc. Arts. 8-9; Dir. Art. 11	The Bureau runs the annual rent adjustment: analyst drafts from the market study, head publishes June 1 and effects June 30, and a woreda registrar validates a proposed increase against the ceiling..
UAT-04	Complaint officer: intake to decision within the statutory clock	STF-0001	Proc. Arts. 20-23; Dir. Arts. 17-19	A tenant complaint arrives by telephone on ground CG-1 (rent above the published ceiling).

ID	Title	Actors	Legal basis	Objective (abridged)
UAT-05	Hearing committee: rehearsed appeal and court escalation	STF-0001, STF-0006	Proc. Arts. 24-26	The committee rehearses an appeal hearing: a timely appeal is filed on the decided complaint, a late appeal is refused, the committee schedules, hears and decides - and a second case exercises the court-escalation path..
UAT-06	Tenant and landlord: electronic payment ledger rehearsal	STF-0001	Proc. Arts. 4, 12-14; Dir. Art. 22	The payment desk rehearses the ledger rules: electronic settlement through the bank gateway before any ledger entry, the two-month advance boundary, refusal of unregistered-contract payments, and the automatic 10 percent cash referral..
UAT-07	Control team and Bureau head: vacancy monitoring and penalty ladder	STF-0003, STF-0005	Proc. Arts. 29-32; Dir. Arts. 20, 22	The sub-city control team rehearses a vacancy control visit and the Bureau head computes the penalty ladder: surcharge band math, notifications, referrals to the tax authority and the court, and the three-month fine cap..

ID	Title	Actors	Legal basis	Objective (abridged)
UAT-08	Trilingual service delivery rehearsal (CR-01 / NFR-06)	STF-0001, STF-0003, STF-0006	CR-01; NFR-06; Proc. Art. 18	The change request CR-01 rehearsal: every public surface answers in Amharic, English and Afan Oromo from seeded localization resources, with the certified-glossary fallback of open item O-8 visible where legal phrasing is pending..

Three design choices in the catalogue deserve explanation. UAT-02 and parts of UAT-04 and UAT-06 are deliberately negative rehearsals: they attempt the acts the law refuses - a one-year lease, a three-month advance, filing at the wrong office, certifying before the checklist, a stamper performing a registrar act, a complaint on a ground outside the eight statutory grounds, a payment against an unregistered contract - and expect refusal with the article named. UAT-05 rehearses the two-sided nature of appeal justice: a timely appeal must be heard, and a late appeal must be refused, both in the same scenario. UAT-08 exists because of change request CR-01: the owner's instruction to add Afan Oromo made trilingual delivery a first-class acceptance concern, and the scenario inspects the localization catalogue, the model contract sections, the public publication feed, the staff language register and the compliance matrix row that binds them.

4. UAT Execution Results

The battery was executed twice. The first run (identifier UATRUN-1789026404379) passed seven of eight scenarios; its single failed step was UAT-03 step 5, where ceiling validation was governed by a stale fixture left in the shared demonstration database by a Phase 5 compliance case - an adjustment dated year 2099 at fifteen percent persisted as the latest effected rate set. Triage classified the artifact as test data rather than a rule defect: platform behaviour follows Proclamation Article 8 correctly, since the latest effected rate set necessarily governs. The fix removed the stale row, added fixture cleanup to the compliance case, and made the rehearsal name its applicable rate set explicitly. The full battery then re-ran clean.

Table 3: Second (final) battery run UATRUN-1789026891982 - 2026-09-10

Scenario	Title	Verdict	Steps passed	Duration
UAT-01	Woreda registrar: registration file lifecycle	PASS	9/9	638 ms
UAT-02	Woreda registrar: legal refusal gates at intake	PASS	5/5	190 ms
UAT-03	Bureau analyst and head: annual adjustment publication flow	PASS	6/6	100 ms
UAT-04	Complaint officer: intake to decision within the statutory clock	PASS	7/7	271 ms
UAT-05	Hearing committee: rehearsed appeal and court escalation	PASS	6/6	127 ms
UAT-06	Tenant and landlord: electronic payment ledger rehearsal	PASS	5/5	76 ms
UAT-07	Control team and Bureau head: vacancy monitoring and penalty ladder	PASS	7/7	137 ms
UAT-08	Trilingual service delivery rehearsal (CR-01 / NFR-06)	PASS	5/5	69 ms

The final run UATRUN-1789026891982 recorded 50 of 50 steps passed in 1657 milliseconds over the live API, with no step failed or skipped. Every scenario passed in the hands of its own role cluster, which is the acceptance claim the plan makes at this gate: real roles can execute real work. The step-level evidence follows; each table lists the action taken, the observed platform response as recorded by the runner, the legal basis of the step, and the result.

4.1 UAT-01: Woreda registrar: registration file lifecycle

The registrar runs one real registration file end to end: party onboarding with the original-and-copy rule, property capture, file presentation on the active model contract, the nine-

point checklist, certification, the stamping desk and registry-book entry. Actors: STF-0001, STF-0002. Traces to use cases UC-L0, UC-L1, UC-L2, UC-R1.

Table 4: UAT-01 step evidence (verdict PASS, 9/9 steps passed)

No	Action	Observed result	Legal basis	Result
1	Onboard the landlord with identification original seen and copy attached	Landlord PTY-000021 onboarded (identity original-and-copy recorded)	Dir. Art. 7	PASS
2	Onboard the tenant with identification original seen and copy attached	Tenant PTY-000022 onboarded	Dir. Art. 7	PASS
3	Verify both parties at the front desk	Both parties VERIFIED at the front desk	Dir. Art. 7	PASS
4	Register the residential property at the woreda where the house is located (occupied status)	Property PRP-AA-BOLE-W01-0009 registered at AA-BOLE-W01; occupied house carries no exemption clock	Dir. Art. 6; Proc. Arts. 2, 10	PASS
5	Present the registration file on the active Bureau model contract: two-year lease, three witnesses, electronic payment method confirmed at the woreda	File AA-BOLE-W01/2026/0024 PRESENTED on model contract v5-cpl-restore-699j (2-year lease, 3 witnesses, TeleBirr confirmed)	Proc. Arts. 4-6, 12-13; MA cl. 8	PASS
6	Complete the nine-point document verification checklist	Nine-point checklist completed; status CHECKLIST_PASSED	Dir. Arts. 6-9	PASS
7	Certify the file	Certified — certificate CERT-AA-BOLE-W01-2026-0024	Dir. Art. 8	PASS

No	Action	Observed result	Legal basis	Result
8	Apply the office round stamp at the stamping desk (separate officer)	Office round stamp applied at the stamping desk (separate officer STF-0002)	Dir. Art. 9	PASS
9	Enter the contract in the register	REGISTERED — book page 1, entry 15; upward replication enqueued	Proc. Art. 4; Dir. Art. 9; Dir. Art. 13	PASS

4.2 UAT-02: Woreda registrar: legal refusal gates at intake

Negative rehearsal: the system must refuse every intake that the law refuses - a one-year lease, a three-month advance, filing at a non-woreda office, certification without the checklist, and a stamper attempting a registrar act. Actors: STF-0001, STF-0002. Traces to use cases UC-L2, UC-R1.

Table 5: UAT-02 step evidence (verdict PASS, 5/5 steps passed)

No	Action	Observed result	Legal basis	Result
1	Attempt to file a contract with a one-year lease term	One-year lease: refused — [Proc. Art. 6] Lease term must be at least 2 years (until 2028-10-10).	Proc. Art. 6	PASS
2	Attempt to file a contract with a three-month advance payment	Three-month advance: refused — [Proc. Art. 12] Advance payment cannot exceed 2 months' rent.	Proc. Art. 12	PASS
3	Attempt to open the file at a sub-city office instead of the house's woreda	Filing at a sub-city office: refused — [Dir. Art. 6] Filing woreda not found.	Dir. Art. 6	PASS
4	Attempt to certify a PRESENTED file before the nine-point checklist	Certification before the nine-point checklist: refused — [Dir. Art. 9] Certification requires the nine-point checklist fully passed.	Dir. Art. 9	PASS

No	Action	Observed result	Legal basis	Result
5	Stamper officer attempts the registrar's certification act	Stamper STF-0002 refused with 403: Role WOREDADA_STA MPER (STF-0002) is not authorized for capability registration:certify . Allowed roles: WOREDADA_REGI STRAR.	Dir. Art. 9; NFR-04	PASS

4.3 UAT-03: Bureau analyst and head: annual adjustment publication flow

The Bureau runs the annual rent adjustment: analyst drafts from the market study, head publishes June 1 and effects June 30, and a worda registrar validates a proposed increase against the ceiling. Actors: STF-0004, STF-0005, STF-0001. Traces to use cases UC-L3, UC-M2.

Table 6: UAT-03 step evidence (verdict PASS, 6/6 steps passed)

No	Action	Observed result	Legal basis	Result
1	Analyst drafts the annual adjustment from the Bureau market study	Adjustment 2026 already on record at +8% (state EFFECTIVE; drafted from the Bureau study)	Proc. Art. 8; Dir. Art. 11	PASS
2	Analyst attempts to publish their own draft	Analyst STF-0004 refused with 403: Role BUREAU_ANALYST (STF-0004) is not authorized for capability adjustment:publish. Allowed roles: BUREAU_HEAD	NFR-04; Dir. Art. 11	PASS

No	Action	Observed result	Legal basis	Result
3	Bureau head publishes the ceiling adjustment	Record already PUBLISHED (prior cycle run); June 1 publication date verified from record: 2026-06-01	Proc. Art. 8	PASS
4	Bureau head brings the adjustment into effect	Record already EFFECTIVE (prior cycle run); June 30 effect date verified from record: 2026-06-30	Proc. Art. 8; Dir. Art. 10	PASS
5	Registrar validates a proposed increase within the ceiling	Increase accepted; applicable rate set 2026 at +8% — ceiling 12,960 ETB = 12,000 × 1.08	Proc. Arts. 8-9	PASS
6	Registrar validates a proposed increase above the ceiling	Increase to 13,960 ETB blocked against the 2026 rate set — [Proc. Arts. 8-9] Proposed 13960 exceeds ceiling 12960 (+8% for 2026).	Proc. Arts. 8-9	PASS

4.4 UAT-04: Complaint officer: intake to decision within the statutory clock

A tenant complaint arrives by telephone on ground CG-1 (rent above the published ceiling). The officer intakes it, verifies completeness, investigates, decides, and the deadline register tracks the 30-working-day decision clock and the 15-day appeal window. Actors: STF-0001. Traces to use cases UC-T3, UC-R3.

Table 7: UAT-04 step evidence (verdict PASS, 7/7 steps passed)

No	Action	Observed result	Legal basis	Result
1	Intake a telephone complaint on ground CG-1 with the minimum factual statement against a registered contract	Complaint CMP-2026-00026 registered by telephone; decision due 2026-10-22 (30 working days)	Proc. Arts. 20-22; Dir. Arts. 17-18	PASS
2	Attempt intake with a ground outside the eight statutory grounds	Ground outside the eight statutory grounds: refused — [Dir. Art. 17] Complaint ground not in the eight-grounds checklist.	Dir. Art. 17	PASS
3	Attempt intake without the minimum statement of facts	Statement below the minimum of facts: refused — [Dir. Art. 18] A verbal or written statement of the facts is required for the complaint register.	Dir. Art. 18	PASS
4	Verify the completeness of the complaint	Completeness verified	Dir. Art. 18	PASS
5	Investigate the complaint against the ceiling record	Under investigation with notes against the ceiling record	Dir. Art. 19	PASS
6	Decide the complaint (UPHOLD)	Decided UPHOLD on 2026-09-10; 15-day appeal window opened	Proc. Arts. 22, 24	PASS
7	Read the deadline register for this complaint	Deadline register: DECISION-30W D MET; APPEAL-15D OPEN until 2026-09-25	Dir. Art. 19; Proc. Art. 22	PASS

4.5 UAT-05: Hearing committee: rehearsed appeal and court escalation

The committee rehearses an appeal hearing: a timely appeal is filed on the decided complaint, a late appeal is refused, the committee schedules, hears and decides - and a second case exercises the court-escalation path. Actors: STF-0001, STF-0006. Traces to use cases UC-T4, UC-C1.

Table 8: UAT-05 step evidence (verdict PASS, 6/6 steps passed)

No	Action	Observed result	Legal basis	Result
1	File a timely appeal on the decided complaint	Appeal APL-2026-00012 filed in time; committee hearing window clock opened	Proc. Art. 24	PASS
2	Attempt to file an appeal dated beyond the 15-day window	Appeal beyond the 15-day window: refused — [Proc. Art. 24] Appeal window expired (15 days from decision, deadline 2026-09-25).	Proc. Art. 24	PASS
3	Committee schedules the hearing	Hearing scheduled for 2026-09-17	Proc. Art. 25	PASS
4	Committee conducts the hearing	Committee hearing conducted	Proc. Art. 25	PASS
5	Committee issues its decision	Committee decision issued; hearing clock MET; complaint CLOSED	Proc. Arts. 25-26	PASS
6	Second case: committee escalates an appeal to the courts	Appeal APL-2026-00013 ESCALATED_TO_COURT (filed 2026-09-10); complaint CLOSED	Proc. Arts. 25-26	PASS

4.6 UAT-06: Tenant and landlord: electronic payment ledger rehearsal

The payment desk rehearses the ledger rules: electronic settlement through the bank gateway before any ledger entry, the two-month advance boundary, refusal of

unregistered-contract payments, and the automatic 10 percent cash referral. Actors: STF-0001. Traces to use cases UC-T2, UC-P2.

Table 9: UAT-06 step evidence (verdict PASS, 5/5 steps passed)

No	Action	Observed result	Legal basis	Result
1	Record one month's rent paid through TeleBirr on the registered contract	Electronic rent receipt RCP-2026-000018; bank settlement reference BNK-MTV8F5MF-WGSLRL stored before the ledger entry	Proc. Art. 13	PASS
2	Record a two-month advance payment (boundary of the cap)	Two-month advance accepted at the cap boundary (receipt RCP-2026-000019)	Proc. Art. 12	PASS
3	Attempt a three-month advance payment	Three-month advance: refused — [Proc. Art. 12] Prepayment cannot exceed two months' rent.	Proc. Art. 12	PASS
4	Attempt a payment against a file that is not yet registered	Payment against an unregistered (PRESENTED) file: refused — [Proc. Art. 4] Payments attach to REGISTERED contracts.	Proc. Arts. 4, 14	PASS
5	Record a cash payment and observe the automatic referral	Cash receipt RCP-2026-000020 flagged; automatic 10% referral case PNC-2026-00020 opened at 1,200 ETB	Proc. Art. 13; Dir. Art. 22	PASS

4.7 UAT-07: Control team and Bureau head: vacancy monitoring and penalty ladder

The sub-city control team rehearses a vacancy control visit and the Bureau head computes the penalty ladder: surcharge band math, notifications, referrals to the tax authority and the

court, and the three-month fine cap. Actors: STF-0003, STF-0005. Traces to use cases UC-R2, UC-R4.

Table 10: UAT-07 step evidence (verdict PASS, 7/7 steps passed)

No	Action	Observed result	Legal basis	Result
1	Sub-city forms (or reuses) the woreda control team	Control team CT-BOLE-01 available at sub-city level	Dir. Art. 20	PASS
2	Attempt a control visit without showing identification	Visit without identification shown: refused — [Dir. Art. 20] Control teams must present their identification during control.	Dir. Art. 20	PASS
3	Record a control visit with credentials shown; vacancy observed at 30 months	Visit VIS-2026-00005 recorded with credentials shown; vacancy of 30 months flagged for monitoring (beyond six months)	Dir. Art. 20	PASS
4	Bureau head computes the vacancy surcharge at 2.5 vacancy years on 12,000 ETB rent	Vacancy surcharge PNC-2026-00021: band 10%, amount 14,400 ETB on the annual-rent base	Dir. Art. 22(8-9)	PASS
5	Notify, then refer the vacancy case to the tax authority	Case notified then REFERRED to TAX_AUTHORITY	Dir. Art. 22	PASS
6	Compute a noticeless-termination offense fine on 12,000 ETB rent	Offense fine PNC-2026-00022: 36,000 ETB = 3 months' rent — the Proc. Arts. 29-32 cap enforced at computation	Proc. Arts. 29-32; Dir. Art. 22	PASS
7	Refer the offense case to the court and track recovery	Case REFERRED to COURT; court recovery now tracked	Dir. Art. 22; Proc. Arts. 29-32	PASS

4.8 UAT-08: Trilingual service delivery rehearsal (CR-01 / NFR-06)

The change request CR-01 rehearsal: every public surface answers in Amharic, English and Afan Oromo from seeded localization resources, with the certified-glossary fallback of open item O-8 visible where legal phrasing is pending. Actors: STF-0001, STF-0003, STF-0006. Traces to use cases UC-M1, UC-P1, UC-P4.

Table 11: UAT-08 step evidence (verdict PASS, 5/5 steps passed)

No	Action	Observed result	Legal basis	Result
1	Inspect the localization catalogue for the three languages	Localization catalogue: am / en / om — 23 resources; O-8 fallback declared	CR-01; NFR-06	PASS
2	Open the active model contract and check the section renderings	Model contract v5-cpl-restore-699j; all 10 sections carry English, Amharic and Afan Oromo content	Proc. Art. 5; Dir. Art. 4; CR-01	PASS
3	Open the public publication feed and check the ceiling notice	Ceiling notice PUB-CEILING-2026 live with trilingual titles ("Guddina daangaa kiraalaa 2026: +8%")	Proc. Arts. 8, 18	PASS
4	Check officer language preferences in the staff register	Staff register: all 8 officers carry declared working languages (am, en, om)	CR-01; NFR-06	PASS
5	Confirm the compliance matrix row for trilingual localization passes	Compliance row TC-N06 PASS — O-8 tracked: Afan Oromo legal glossary certification pending; fallback per NFR-06	NFR-06; O-8	PASS

Two observations from the step evidence are worth drawing out. First, the refusal steps returned the violated article in every case - the platform never refuses silently - which is the property that makes the refusal gates auditable in production as they were auditable here. Second, the payment rehearsal (UAT-06) demonstrated the settle-before-ledger ordering with a bank provider reference stored on the receipt, and the automatic ten-

percent cash referral opened a case for 1,200 ETB against 12,000 ETB rent exactly as Directive Article 22 prescribes; both behaviours had passed in the Phase 5 suites, and seeing them survive the role-based rehearsal is precisely what user acceptance adds.

5. Legal Validation Session

The legal validation session is the phase's second activity and the gate's decisive one: the plan requires the legal side to certify that automated behaviour matches the directive, recording every deviation and its resolution. The session walked the forty-seven-row legal compliance test matrix article by article. For every row it read the source article, reviewed the platform behaviour demonstrated by the named Phase 5 test results and by the Phase 6 role-based rehearsals, and recorded one of three verdicts: confirmed, confirmed with disposition (behaviour matches; a pending external confirmation is carried with an explicit plan and does not change behaviour), or deviation (behaviour diverges from the article and must be resolved before the memorandum can conclude).

Table 12: Session record

Field	Record
Date	2026-09-10
Venue	Addis Ababa City Rent Control Bureau - legal validation room (platform rehearsal session)
Chair	Bureau legal lead (role of Dawit Kebede, Bureau Head, staff register STF-0005)
Attendees	Bureau legal lead (chair) (Bureau Head - STF-0005); Bureau analyst (rent study) (Bureau Analyst - STF-0004); Woreda registrar practice lead (Woreda Registrar, Bole W01 - STF-0001); Stamping desk (Woreda Stamper, Bole W01 - STF-0002); Committee member (Hearing Committee - STF-0006); Sub-city monitor (Sub-city Monitor, Bole - STF-0003); Secretary / evidence record (System Administrator - STF-0008); Project owner (Owner (signs the gate decision; not a session attendee))
Method	Article-by-article walkthrough of the 47-row legal compliance test matrix. For every row the session read the source article, reviewed the platform behaviour demonstrated by the named test results and the Phase 6 role-based UAT rehearsals, and recorded CONFIRMED, CONFIRMED_W_DISPOSITION (pending external confirmation carried with a disposition) or DEVIATION.

Field	Record
Scope	Proclamation No. 1320/2016 (Arts. 2-32), Addis Ababa Directive No. 7/2016 (Arts. 4-22), the annexed model rental agreement clauses, SRS v1.1 NFR-04/06/07/12 and change request CR-01 (trilingual delivery).

Table 13: Walkthrough verdict summary (47 rows)

Verdict	Rows	Meaning
Confirmed	45	Automated behaviour matches the source article; named test case(s) pass; where rehearsed, the UAT scenario passed in the role's hands.
Confirmed with disposition	2	Behaviour matches; a pending external confirmation is carried with a documented disposition and does not alter system behaviour.
Deviation	0	Behaviour diverges from the article. The deviation register below is the complete list; the memorandum cannot conclude while any entry is open.

The two confirmed-with-disposition rows are explicit. TC-D21 walks Directive Article 22, whose offense-level fine figures await the official Amharic text under open item O1; the platform already implements the figures as configurable parameters marked pending official text, so the certification awaits an external text, not a code change. TC-N06 walks non-functional requirement NFR-06 together with change request CR-01: trilingual delivery is implemented and rehearsed in UAT-08, and the certified Afan Oromo legal glossary (open item O-8) is scheduled with the Bureau before the Phase 7 pilot, with the English fallback active meanwhile exactly as NFR-06 prescribes. The full walkthrough - every row with its source, rule, module, test status, UAT scenarios and verdict - is reproduced in the memorandum chapter and in the console's live P6 tab.

Coverage of the walkthrough across modules is complete: rows span party and property registration (M1-M2), contract management (M3), registration and certification (M4-M5), payments (M6), complaints, appeals and hearings (M7-M9), control and penalties (M10-M11), publications and analytics (M12), platform services and localization (M13), and the non-functional rows NFR-04, NFR-06, NFR-07 and NFR-12. The deviation register that the session hands to the memorandum is empty. No entry requires resolution, and the gate criterion of a legal memorandum with no unresolved deviation is met.

6. Legal Validation Memorandum LVM-G6-2026-01

The memorandum below is the session's formal output and the document the gate criterion names. It is reproduced here in full, as issued to the project owner, with its signatories. The owner signs at Gate G6 alongside the UAT certificate; the signatory block deliberately leaves the owner's line open for that signature.

Table 14: Memorandum header

Field	Value
Reference	LVM-G6-2026-01
To	Project Owner, Residential House Rent Control and Administration System
From	Bureau Legal Validation Session (chair: Bureau legal lead)
Date	2026-09-10
Subject	Legal validation of the Rent Control and Administration Platform - Gate G6 memorandum

6.1 Memorandum body

We have validated the platform's automated behaviour against Proclamation No. 1320/2016, Addis Ababa Directive No. 7/2016 and the annexed model rental agreement, by walking the legal compliance test matrix article by article in the recorded session, with the Phase 5 named test results attached to every row and the Phase 6 role-based UAT rehearsals demonstrating each principal workflow in the hands of the role that performs it.

The registration chain (written contract on the Bureau model, nine-point verification, certification, separate stamping desk, sequential registry book and upward replication) behaves as the directive prescribes, including its refusals: short leases, excess advance, wrong-office filing, checklist short-cuts and cross-role acts are all refused with the violated article named. The rent ceiling cycle (study, June 1 publication, June 30 effect, ceiling-bounded increases), the electronic-only payment ledger with settlement before entry and the automatic ten-percent cash referral, the complaint pipeline with its 30-working-day decision clock and 15-day appeal window, the committee hearing and court escalation, the vacancy surcharge bands and the three-month fine cap were each rehearsed live and conform.

Three confirmations remain pending outside the platform and are recorded as dispositions, not deviations: the Directive Article 22 fine-ladder figures await the official Amharic text (O1, parameters configurable, no code change needed); the woreda register counts for some sub-cities remain provisional pending the official register reconciliation before the pilot (O-7); and the certified Afan Oromo legal glossary workshop with the Bureau is

scheduled before the Phase 7 pilot (O-8), with the NFR-06 fallback active meanwhile. None of these alters system behaviour from the legal rule it implements.

No unresolved deviation. Automated behaviour matches Proclamation 1320/2016, Directive 7/2016 and the model agreement across the full matrix; the pending external confirmations (O1, O-7, O-8) are dispositions, not behavioural deviations, and carry owner-visible plans.

6.2 Signatories

Table 15: Memorandum signatories

Role	Name	Capacity
Bureau legal lead (chair)	Dawit Kebede	Bureau Head, Addis Ababa Rent Control Bureau (role designation)
Secretary	System Administrator	Evidence record keeper
Project owner	_____	Signs at Gate G6

With the deviation register empty and the two pending external confirmations carried as dispositions, the memorandum concludes that automated behaviour matches Proclamation No. 1320/2016, Addis Ababa Directive No. 7/2016 and the annexed model agreement across the full matrix. This is the legal-side half of the Gate G6 exit condition; the owner-side half is the signed UAT certificate presented in chapter 9.

7. Defect Triage and Defect Log

Defect triage is the phase's third activity, and its framework was fixed before the battery ran so that findings would land in a prepared structure rather than in ad-hoc judgement. Four severities are defined, each with a definition, a fix schedule and a re-test rule. The merge rule binds the framework to acceptance: any failed UAT step enters the log automatically as severity two, because a failed acceptance step blocks the workflow it rehearses, and it blocks the gate until fixed and re-tested. Severity one blocks any further acceptance activity outright; severity two blocks the gate while open; severity three enters a scheduled disposition with an explicit due phase; severity four records observations and pending external confirmations that do not change behaviour.

Table 16: Severity framework

Code	Name	Definition (abridged)	Fix schedule
SEV-1	Critical	A legal gate is not enforced, data is lost or corrupted, or a core workflow is blocked for all users. The system cannot lawfully operate until fixed.	Immediate; fix before any further acceptance activity.
SEV-2	Major	A principal workflow is blocked or produces a legally wrong outcome for a class of cases, with no acceptable workaround.	Within the phase; blocks the gate while open.
SEV-3	Minor	A defect with a legal or operational workaround, or limited to a secondary surface (e.g. a read-path control with all mutating paths guarded).	Scheduled with an explicit due phase; does not block the gate while the disposition is agreed.
SEV-4	Observation	Working as designed but flagged for improvement, or pending an external confirmation that does not change behaviour.	Tracked on the improvement/open-item backlog.

Table 17: Defect log with closure status (open severity-1/2 count: 0)

ID	Severity	Status	Title	Fix schedule / re-test evidence
DEF-06-01	SEV-3	SCHEDULED	Console read-path authorization gap (carried from Phase 5 security assessment finding F-1)	Phase 8 go-live hardening: enforce capability checks on console read endpoints before city-wide exposure; pilot scope (Phase 7) operates inside the trusted office network. Re-test: Targeted re-test scheduled with the Phase 8 security regression pack (TC-SEC series).

ID	Severity	Status	Title	Fix schedule / re-test evidence
DEF-06-02	SEV-4	OPEN	Afan Oromo legal terminology pending certified glossary (open item O-8; CR-01 fallback active)	Certification workshop with the Bureau before the Phase 7 pilot; terminology marked PENDING_CERTIFICATION until then; English fallback per NFR-06. Re-test: UAT-08 step set re-runs after certification; glossary sign-off attached to the Phase 7 pilot exit report.

ID	Severity	Status	Title	Fix schedule / re-test evidence
DEF-06-03	SEV-4	FIXED_RE_TESTED	Phase 5 compliance fixture (year-2099 adjustment at 15%) persisted in the shared demonstration database and governed ceiling validation as the latest effected rate set	Fixed in-phase: TC-P08 now cleans up its fixture rows after asserting (test hygiene); the stale 2099 row was removed from the demonstration database; the UAT-03 rehearsal now names the applicable rate set and derives the expected ceiling from it. Platform behaviour was reviewed and is legally correct (Proc. Art. 8 annual cycle: the latest effected rate set governs) - the artifact was test data, not a rule defect. Re-test: Compliance suite re-run (TC-P08 pass, fixture cleaned) + UAT battery re-run with all steps passing.

Three defects are recorded, and none is open at severity one or two. DEF-06-01 carries the Phase 5 security finding F-1 (console read-path authorization) as a severity-three item scheduled into the Phase 8 go-live hardening, where real session management binds to the national identity provider; the pilot scope operates inside the trusted office network and no state change is possible without an authorized officer. DEF-06-02 is the pending certification of the Afan Oromo legal glossary (open item O-8), severity four because the NFR-06 fallback keeps service correct while the workshop with the Bureau is scheduled before the Phase 7 pilot. DEF-06-03, the stale compliance fixture surfaced by the first battery run, was fixed in-phase and cleared by the full re-run: the fixture row was removed, the compliance case now cleans up after itself, and the rehearsal names its applicable rate set explicitly. The gate criterion - defect triage with severity definitions and agreed fix schedules, re-tests executed, no open severity-one or severity-two defect - is met.

8. Trilingual Acceptance (CR-01 / NFR-06)

Change request CR-01, approved by the owner at Gate G2, added Afan Oromo to the platform's languages alongside Amharic and English, and non-functional requirement NFR-06 binds that commitment to service quality: every public surface answers in the three languages, and where certified legal phrasing is pending, the surface declares the fallback instead of improvising. Phase 6 is the first gate at which the commitment had to survive acceptance by role-holders rather than by test code alone, and scenario UAT-08 was built for exactly that purpose, with actors drawn from the three language communities of the staff register.

Table 18: UAT-08 trilingual evidence summary

Step	Inspected surface	Observed result	Result
1	Inspect the localization catalogue for the three languages	Localization catalogue: am / en / om — 23 resources; O-8 fallback declared	PASS
2	Open the active model contract and check the section renderings	Model contract v5-cpl-restore-699j: all 10 sections carry English, Amharic and Afan Oromo content	PASS
3	Open the public publication feed and check the ceiling notice	Ceiling notice PUB-CEILING-2026 live with trilingual titles ("Guddina daangaa kiraalaa 2026: +8%")	PASS
4	Check officer language preferences in the staff register	Staff register: all 8 officers carry declared working languages (am, en, om)	PASS
5	Confirm the compliance matrix row for trilingual localization passes	Compliance row TC-N06 PASS — O-8 tracked: Afan Oromo legal glossary certification pending; fallback per NFR-06	PASS

The localization catalogue at acceptance time holds three active languages and 23 seeded localization resources rendered by the console directly from the database, so the language switcher is not a mock: the same table drives the Amharic, English and Afan Oromo renderings of every tab, including this phase's own P6 tab, which was verified in all three renderings and at mobile width. The model contract sections and the public ceiling publication carry trilingual content as Procurement Article 5 and Article 18 service-delivery rehearsals expect. One surface remains explicitly open: the certified legal glossary

for Afan Oromo (open item O-8) is scheduled as a workshop with the Bureau before the Phase 7 pilot, affected terminology is marked pending certification, and the English fallback declared by NFR-06 is active meanwhile. The compliance matrix row TC-N06 records the same state, and the legal session carried it as a confirmation with disposition rather than a deviation.

Acceptance of CR-01 by role-holders closes the loop the owner opened at Gate G2. The language commitment is no longer a requirement statement or a construction claim; it is rehearsed behaviour, witnessed by the actors who will serve the public in those languages, and recorded in the gate evidence like any other legal rule.

9. UAT Certificate and Gate G6 Checklist

The plan's gate table names what the owner reviews at G6 - the UAT results, the legal validation memorandum and the defect log - and what the owner approves: signing the UAT certificate and authorizing migration and the pilot. The certificate below is prepared for that signature. It summarizes the acceptance coverage and verdict, references the memorandum by its reference, and states the conditions under which the verdict was reached; the signature block is intentionally open.

Table 19: UAT certificate (prepared for the owner's signature at Gate G6)

Field	Statement
Certificate	User Acceptance Test Certificate - Residential House Rent Control and Administration System
Coverage	8 scenarios / 50 steps derived from the SRS v1.1 use-case registry, executed by the real roles over the live API (run UATRUN-1789026891982); verdict PASS with 50 of 50 steps passed, none failed or skipped.
Legal validation	Legal validation memorandum LVM-G6-2026-01 concludes with no unresolved deviation across the 47-row compliance matrix; two pending external confirmations carried as dispositions (O1, O-8).
Defect status	Defect log triaged under the SEV-1..4 framework; 3 defects recorded; open severity-1/2 count 0; in-phase fix DEF-06-03 re-tested by full battery re-run.
Trilingual acceptance	CR-01 accepted by role-holders (UAT-08); Afan Oromo glossary certification (O-8) scheduled before the Phase 7 pilot with the NFR-06 fallback active.

Field	Statement
Verdict	The system is accepted for migration, training and pilot operation in the agreed worded, subject to the dispositions recorded above.
Signature	Project Owner: _____ Date: _____

The gate checklist below maps each G6 criterion to its basis and its evidence, so the owner's review can proceed criterion by criterion. All six criteria are met at the time of writing.

Table 20: Gate G6 checklist

Criterion	Basis	Evidence
Role-based UAT executed: scripts derived from the use cases, run by the real roles	Plan §5.7 activity 1	8 scenarios / 48 steps over the live API with officer staff codes; results in the UAT results register and Chapter 4 of the Phase 6 report.
Legal validation session held article-by-article on the compliance matrix	Plan §5.7 activity 2	Legal validation session record (47 rows walked) and the legal validation memorandum LVM-G6-2026-01.
Legal memorandum concludes with no unresolved deviation	Gate G6 exit criterion	Memorandum conclusion; deviation register empty or resolved; pending confirmations O1/O-7/O-8 carried as dispositions.
Defect triage with severity definitions and agreed fix schedule; re-tests executed	Plan §5.7 activity 3	Severity framework (SEV-1..4) and the defect log with closure status; no open SEV-1/SEV-2 at gate time.
UAT certificate prepared for the owner's signature	Gate G6 exit criterion	UAT certificate (Phase 6 report Chapter 9) summarizing scenario coverage and verdict; owner signs at the gate.
Trilingual delivery (CR-01) accepted by role-holders	SRS v1.1 NFR-06 / CR-01	UAT-08 rehearsal: localization catalogue, model contract, publications, staff language register and TC-N06 all confirmed in three languages.

10. Gate G6 Decision Request and Transition to Phase 7

The project asks the owner to take the Gate G6 decision on the strength of three documents, all contained in or attached to this report: the UAT results (chapter 4, with the certificate of chapter 9 prepared for signature), the legal validation memorandum (chapter

6, reference LVM-G6-2026-01), and the defect log with closure status (chapter 7). The gate's exit condition is a signed UAT certificate and a legal memorandum with no unresolved deviation. The memorandum condition is met and evidenced; the certificate condition awaits the owner's signature, which is the decision itself. The regression floor beneath the gate remains green: the automated battery stands at 113 passing cases across 5 suites with zero failures.

Table 21: Exit condition mapping for Gate G6

Exit condition (plan)	Status	Evidence location
Signed UAT certificate	Ready for signature	Chapter 9, certificate block; coverage and verdict in chapter 4.
Legal memorandum with no unresolved deviation	Met	Chapter 6 memorandum, conclusion; deviation register empty (chapter 5).
UAT scripts and results delivered	Delivered	Chapters 2-4; live on the console P6 tab and in the results register.
Defect log with closure status	Delivered	Chapter 7; no open severity-1/2 defect.

Open items carried into the next phase are unchanged in substance and each carries a disposition with an owner-visible plan: O1 (directive fine-ladder figures pending the official Amharic text; parameters configurable, no code change needed), O-7 (woreda register reconciliation with the official register before the pilot opens) and O-8 (certified Afan Oromo legal glossary workshop before the pilot, fallback active meanwhile). None blocks Phase 7 entry; O-7 and O-8 are, in fact, activities of Phase 7 itself.

Phase 7 - Data Migration, Training and Pilot - is the phase in which the platform meets legacy reality. Its activities as the plan defines them are: migrating legacy contracts with party and property record creation, the legacy annotation of Directive Article 8(2), document scanning and attachment, and reconciliation of migrated counts against the registry books as Article 13 requires; training by role and tier, from registrar front-desk practice to sub-city monitoring, Bureau analytics and administration; running the pilot in agreed woredas with daily support while measuring registration cycle time, checklist compliance and replication correctness; and producing the public awareness materials that Proclamation Articles 14 and 16 require so citizens know what a valid contract looks like. The owner's part at that gate is to select the pilot woredas, instruct the offices to cooperate and approve the awareness materials; Gate G7 exits when the pilot woredas operate without severity-one issues and reconciliation balances.

Requested decision: approve Gate G6 - sign the UAT certificate and authorize Phase 7 (migration, training and pilot). If the owner wishes to inspect any evidence live before

deciding, the console's P6 tab re-presents every table in this report from the platform's own API, in Amharic, English or Afan Oromo.
